

SonaSecure

24/7 Cloud-based Email Protection & Email Continuity

Keeps an organization's email safe and available no matter what.

Protects against ransomware and phishing threats

The FBI reports that ransomware is now a billion dollar a year crime, and it's predicted to get worse. Ransomware can encrypt a whole network and shut down an entire company in seconds by locking the users' infected devices. If the ransom is not paid or fixed, then the criminals can delete all the files on the infected computers.

It is important to have a system-wide plan that ensures protection from ransomware, email viruses, spam, phishing attacks, email flooding, directory harvest attacks, denial of service attacks, and more.

Real-time protection that does not require updates or rollouts

It also is essential to have an email continuity plan in place. If the email system goes down, then employees should still be able to send and receive their email. Productivity is at stake. And, it is important to be able to keep every email that was ever sent or received no matter how long or severe the outage.

Fortunately, security is at the core of SonaSecure's email services. Our multi-layered filtering system provides the most comprehensive protection available from ransomware, phishing, and virus, along with spam filtering.

SonaSecure also provides up to 90 days of email continuity and spooling to ensure that end users stay productive and that no email is lost ever.

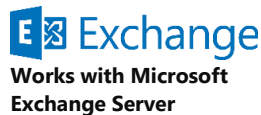

Office 365 Ready

Keep Ransomware, Viruses, Phishing Attacks, and Spam Out of Your Inbox in Real-time

URL protection; 99.9 percent effectiveness rate

SonaSecure offers six layers of security scanning to ensure a network stays clean. SonaSecure is a complete cloud-based solution that scans

Employees still can send, receive, reply & add attachments to emails even when the primary email server is down

Never lose an email no matter what

Modifies potentially dangerous URLs

for viruses, spam, and malware in real-time with a 99.9 percent effectiveness rate. There is no need to download and install definitions. Users are never out-of-date.

SonaSecure offers URL protection. It prevents email users from clicking on dangerous URLs and directs them to safety. SonaSecure checks the backlinks in every email and then can disable them or re-write these links to ensure that a network is not compromised.

Email Continuity Ensures Productivity

Employees remain productive; never lose an email

SonaSecure's email continuity ensures that employees can read and reply to all recent email when the primary email system is down.

SonaSecure's email spooling holds all email during an outage and then ingest these emails back into the primary email system to ensure that an organization never loses an email. SonaSecure's packages include:

- 1) Seven-day spool with 14 days of email continuity
- 2) 90-day spool and 90 days of email continuity (recommended)

Reports in Real-time

Admins can assess the network's health

The timing of information is essential to IT departments. An hour's delay adversely can impact key decisions to keep the network running. SonaSecure's reports are in real-time. System admins always will know what is going on the exact moment it is happening. SonaSecure takes the guesswork and error out of system information and leads to better decisions and higher productivity.

Key Benefits:

Peace of Mind by Keeping the Network Clean

- Multiple levels of ransomware, virus, phishing, and spam protection
- Over 99.9% of spam identified and quarantined, with less than 0.01% false-positives
- Works with any email system; both on-premise, e.g. Microsoft Exchange Server and cloud systems, e.g. Office 360

Reports are in real-time

- Learns and adapts to provide the most accurate, up-to-date protection
- Delete virus-infected emails while keeping the email message
- Sets up in minutes with no hardware or software to install

Powerful Network Protection:

- Protects against directory harvest and denial-of-service attacks.
- Hides customer mail server from DNS record.
- Active Directory User Sync tool ensures your server only receives email from valid accounts

Multi-layered Anti-spam Filtering Technology:

- Blocks known spammers from using a proprietary list

Blocks 99.9 percent of all spam

Simple & Secure Administration:

- Entirely web-based; no software to install
- Customizable control settings
- Advanced policy options allow for sophisticated rule management, including support for regular expressions

Comprehensive Reporting:

- Set-up quarantine summary reports at pre-established intervals (hourly, daily, etc.)
- Admin-level reports show items like total/percentage caught by domain, top senders and recipients
- Reduces network traffic and server load
- Uses Bayesian filtering to better identify spam for your specific domain
- Utilizes smart rules (heuristics) and frequency-based detection (fingerprinting)
- User defines settings that allow/deny senders, domains, and IPs for any email to the domain

Six layers of security scanning
